EDUCATION

University of Maryland

Bachelor of Science in Computer Science and Mathematics

College Park, MD

Expected Graduation: Dec 2026

TECHNICAL SKILLS

Languages: Java, Python, C, C++, Rust, SQL, JavaScript, HTML/CSS, TypeScript, Swift

Libraries/Frameworks: TensorFlow, scikit-learn, pandas, Numpy, FastAPI, React, Next.js, Flask

Tools/Platforms: Git, GitHub Actions, Docker, AWS, PostgreSQL, Claude Code, Supabase, Grafana

EXPERIENCE

GTM Engineering Intern

Sep 2026 – Present

Dreach (Y Combinator)

San Francisco, CA

- Building an AI-powered platform using Next.js, TypeScript and PostgreSQL, that automates the entire workflow of booking sales conversations with potential customers
- Engineered a browser automation using Puppeteer MCP that handles connection requests, messages, followups and reply tracking on LinkedIn which supports the booking of 15+ calls weekly

Software Engineer

Aug 2024 – Present

Terrapin Works (On-Campus Job)

College Park, MD

- Led an 8-person team to develop Pinpoint, a web-based makerspace management system using Flask, React and MySQL
- Designed project-request forms and booking dashboards in React, reducing booking completion time by 30%
- Developed FastAPI endpoints powering 200+ project request submissions and makerspace booking workflows
- Implemented GitHub Actions CI/CD pipelines, automating testing and deployment and reducing release time by 40%

Software Engineering Intern

May 2026 – Aug 2026

Resensys

Beltsville, MD

- Automated report generation for 500+ bridge-health sensors by building a Python pipeline using docxtpl to populate Word templates with data extracted from a JSON API, cutting report generation time from 5 hours to 10 minutes
- Built a Python and FastAPI powered web-app for internal use to visualize and calibrate raw data from structural-health monitoring sensors installed on 80+ bridges across the world
- Deployed the application on AWS EC2 using Docker, reducing deployment time by 70%
- Held weekly meetings with the 8-person manufacturing team to understand their software needs and translate feedback into application features

Software Engineering Intern

June 2025 – August 2025

JK Tyre & Industries Ltd.

New Delhi, India

- Implemented a Python-based route optimization system using Google Maps API, NetworkX and MySQL that reduced planning time from 4 hours to 45 minutes for a drive across a nationwide dealer network
- Collaborated with the Sales Operations team to identify bottlenecks in the existing planning workflow and source historical dealer data, directly shaping the system's optimization logic
- Used scikit-learn to build and evaluate regression and clustering models on historical dealer data to improve route planning insights

Co-Founder

Sep 2025 – March 2026

AutoZenix AI

Remote

- Founded a CRM automation agency generating \$16,000+ in revenue across US, Canada, and UAE clients
- Engineered an AI voice agent using Vapi that auto-calls ad leads instantly, increasing client conversion rates by 43%
- Delivered 5 production automation systems spanning CRM workflows, WhatsApp pipelines, and cold outreach using Claude Code for n8n workflow development

PROJECTS

Sable Finance | Python, Flask, React, PostgreSQL, Docker

September 2026 – Present

- Built a personal-finance tracking app using Plaid API that gives users a unified view of their finances and transactions
- Enabled tracking for bank accounts, credit cards, prediction markets, cryptocurrency, and investment portfolios
- Developed an MCP server allowing users to connect the app to LLM models (ChatGPT or Claude), enabling users to query their financial data and receive personalized insights
