Lakshay Sharma

240-714-8853 | lsharma3@umd.edu | linkedin.com/in/lakshaysharma2005 | github.com/lakshaysharma2005 | lsharma.vercel.app

Education

University of Maryland Expected: Dec 2026
B.S. in Computer Science and Mathematics College Park, MD
Relevant Coursework: Machine Learning, Artificial Intelligence, GenAI Software Development, Computer Systems, Parallel Computing, Compilers, Database Design, Computational Methods, Data Science, Discrete Math

Skills

Languages: Java, Python, TypeScript, C, C++, Rust, SQL, JavaScript, HTML/CSS
Libraries/Frameworks: FastAPI, Next.js, React, Puppeteer, docxtpl, NiceGUI, NetworkX, Flask, PyTorch, pandas, pytest
Tools/Platforms: Git, GitLab CI/CD, Docker, AWS (EC2, Lambda, S3), PostgreSQL, MySQL, Google Maps API, Plaid API

Experience

Dreach (Y Combinator) Sept 2026 – Present
GTM Engineering Intern San Francisco, CA
- Booked 15+ sales calls with a TypeScript/Puppeteer LinkedIn outreach bot that sends 500+ connection requests per week
- Increased reply rate from 8% to 14% by automating follow-ups and reply tracking with per-prospect state in PostgreSQL
- Built a pipeline that turns LinkedIn post engagers into leads with verified work emails, sourcing 400+ leads in 3 weeks

Terrapin Works Aug 2024 – Present
Software Engineer (On-Campus Job) College Park, MD
- Led an 8-person team to develop Pinpoint, a makerspace management system used by 25+ makerspaces across campus
- Developed 30+ REST API endpoints in Flask powering 200+ project requests and 50+ makerspace bookings every week
- Replaced email-and-spreadsheet intake with React request forms, reducing staff request triage from ∼2 days to same-day
- Fixed a double-booking race condition by adding MySQL row locks to the Flask booking API, ending 15+ conflicts a week
- Cut release time from ∼1 hr to ∼8 min by integrating GitLab CI/CD pipelines that automate unit testing and deployment

Resensys May 2026 – Aug 2026
Software Engineering Intern Beltsville, MD
- Automated weekly report generation for 500+ bridge-health sensors by using Python and docxtpl to populate Word templates with data extracted from a JSON API, cutting report generation time from 5 hrs to 10 mins
- Shipped a Python/NiceGUI app to visualize and calibrate sensor data from 80+ bridges, cutting calibration time by 60%
- Deployed the app on AWS (EC2, Lambda, S3) with Docker and iterated on it weekly with the 8-person team that used it

AutoZenix AI Sept 2025 – Mar 2026
Co-Founder Remote
- Generated $16K+ revenue from 12 clients in the US, Canada, and UAE by building AI voice agents and CRM automations
- Boosted lead conversion by 43% with a Vapi voice agent that calls social media ad leads within ∼30s after form submission
- Built n8n WhatsApp follow-up flows that re-engage leads after the AI call and automatically log each lead's status in Excel

JK Tyre & Industries June 2025 – Aug 2025
Software Engineering Intern New Delhi, India
- Built a Python route optimizer (Google Maps API, NetworkX, MySQL) that cut trip planning from ∼2 hrs to ∼30 min
- Modeled a nationwide dealer network as a weighted graph from Google Maps data, finding shortest paths with Dijkstra's
- Enabled 20+ sales reps to access optimized routes by integrating the optimizer into the existing platform via REST APIs

Projects

Knowledge Distillation Classifier (Hinton et al., 2015 Reproduction) | *Python, PyTorch, FastAPI, pytest*
- Reproduced Hinton et al.'s 2015 paper on MNIST, distilling a 2.4M-param teacher into a 55K-param student (44x smaller)
- Benchmarked teacher vs. student under identical conditions: 8x lower latency and 98% less memory at 98.2% accuracy
- Cut student test errors 28% (250 to 180) by training on the teacher's soft labels, sweeping 6 temperatures and 4 widths

Sable Finance | *Claude Code, TypeScript, Next.js, PostgreSQL, Plaid API*
- Built a personal finance tracker unifying bank, card, brokerage, and crypto accounts via Plaid, syncing 5K+ transactions
- Developed an MCP server connecting LLMs (Claude/ChatGPT) to user financial data for personalized queries and insights
