EDUCATION

University of Maryland

College Park, MD

Bachelor of Science in Computer Science and Mathematics

Expected Graduation: Dec 2026

Relevant Coursework: Algorithms, Data Structures, Machine Learning, Artificial Intelligence (IBM Certified), Computer Systems, Parallel Computing, Compilers, Database Design, Linear Algebra, Data Science, Discrete Math

TECHNICAL SKILLS

Languages: Java, Python, C, C++, Rust, SQL, JavaScript, HTML/CSS, TypeScript

Libraries/Frameworks: pandas, scikit-learn, FastAPI, React, Next.js, Puppeteer, docxtempl, NiceGUI, NetworkX, Flask

Tools/Platforms: Git, GitHub Actions, Docker, AWS, MySQL, PostgreSQL, Claude Code, Grafana, Google Maps API, Plaid API

EXPERIENCE

GTM Engineering Intern

Sep 2026 – Present

Dreach (Y Combinator)

San Francisco, CA

- Build an AI platform that automates 100% of the workflow of booking sales conversations with potential customers
- Supported the booking of 20+ sales calls weekly by engineering a LinkedIn browser automation using Puppeteer that sends out 500+ connection requests per week, handling messages, follow-ups and reply tracking

Software Engineer

Aug 2024 – Present

Terrapin Works (On-Campus Job)

College Park, MD

- Led an 8-person team to develop Pinpoint, a makerspace management system used by 25+ makerspaces across campus
- Developed REST API endpoints powering 200+ project requests and 50+ makerspace bookings daily
- Designed project-request forms and booking dashboards in React, reducing booking completion time by 30%
- Resolved booking data mismatches by testing and fixing inconsistencies between the Flask API and MySQL database
- Implemented GitHub Actions CI/CD pipelines, automating testing and deployment and reducing release time by 40%

Software Engineering Intern

May 2026 – Aug 2026

Resensys

Beltsville, MD

- Automated weekly report generation for 500+ bridge-health sensors by using Python and docxtempl to populate Word templates with data extracted from a JSON API, cutting report generation time from 5 hours to 10 minutes
- Built a web-app using Python and NiceGUI for internal use to visualize and calibrate raw data from sensors on 80+ bridges
- Conducted weekly meetings with an 8-person manufacturing team to translate software needs into application features
- Deployed the application on AWS EC2 using Docker and restricted access to the office IP reducing deployment time by 70%

Software Engineering Intern

June 2025 – August 2025

JK Tyre & Industries Ltd.

New Delhi, India

- Implemented a Python-based route optimization system using Google Maps API, NetworkX and MySQL that reduced time taken for a drive across a nationwide dealer network from 2 hours to 40 minutes on average
- Collaborated with the sales team to source historical dealer data, directly shaping the system's optimization logic
- Executed rollout from staging to 100% production, validating performance and reliability at scale via log analysis

Co-Founder

Sep 2025 – March 2026

AutoZenix AI

Remote

- Founded a CRM automation agency generating \$16,000+ in revenue across US, Canada, and UAE clients
- Closed 50+ deals for clients by selling AI lead follow-up packages to businesses running social media ads
- Engineered an AI voice agent using Vapi that auto-calls ad leads instantly, increasing client conversion rates by 43%
- Built WhatsApp follow-up automations in n8n to keep prospects engaged after the initial AI call and automatically track each lead's status in Excel

PROJECTS

Sable Finance | Python, Flask, React, PostgreSQL, Docker

- Built a personal-finance tracking app using Plaid API that gives users a unified view of their finances and transactions
- Enabled tracking for bank accounts, credit cards, prediction markets, cryptocurrency, and investment portfolios
- Developed an MCP server allowing users to connect the app to LLM models (ChatGPT or Claude), enabling users to query their financial data and receive personalized insights
