EDUCATION

University of Maryland

Bachelor of Science in Computer Science and Mathematics

College Park, Maryland

Expected Graduation: December 2026

EXPERIENCE

Resensys

Software Engineering Intern

Beltsville, Maryland

May 2026 – Current

- Built an automated report-generation pipeline in Python for a Django-based web application, using docxtpl to populate Word templates with bridge structural health sensor data extracted from a JSON API
- Conducted security audits across production codebases using Gitleaks ahead of a client codebase migration
- Migrated the web portal codebase and DynamoDB database to a new client-managed Ubuntu server using WinSCP

AutoZenix AI

Co-Founder & Lead Engineer

College Park, Maryland

July 2025 – Current

- Founded an AI automation agency generating \$16,000+ in revenue across US, Canada, and UAE clients
- Engineered an AI voice agent that auto-calls ad leads, increasing client conversion rates by 43% and revenue by 28%
- Delivered 5 production automation systems spanning CRM workflows, WhatsApp pipelines, and cold outreach using Claude Code for n8n workflow development, reducing manual sales effort by 90%

JK Tyre & Industries Ltd.

Software Engineering Intern

New Delhi, India

June 2025 – August 2025

- Implemented a Python-based route optimization system using Google Maps API, NetworkX and MySQL that reduced planning time from 4 hours to 45 minutes for a drive across a nationwide dealer network
- Collaborated with the Sales Operations team to identify bottlenecks in the existing planning workflow and source historical dealer data, directly shaping the system's optimization logic
- Used scikit-learn to build and evaluate regression and clustering models on historical dealer data to improve route planning insights

Terrapin Works

Software Engineer

College Park, Maryland

August 2024 – May 2025

- Led an 8 person team to develop Pinpoint, a web-based makerspace management system using Flask, React.js and SQL
- Implemented RESTful APIs in Flask to support project requests and booking workflows
- Designed project request forms and booking dashboards in React/Next.js for the Terrapin Works makerspace platform
- Partnered with 50+ campus stakeholders to gather requirements, driving adoption across UMD's makerspace operations

Xficient Inc.

Software Engineering Intern

McLean, Virginia

June 2024 – August 2024

- Developed an AI chatbot (Python, LangChain) that answers user questions on insurance policy PDFs, tested with 50+ documents at 92% answer accuracy
- Leveraged Python and LangChain to automate data extraction from PDFs, reducing processing time by 40% compared to manual review
- Implemented CI/CD pipelines and Dockerized the application to automate testing and deployment

PROJECTS

Sable Finance | Next.js, TypeScript, Plaid, Neon Postgres, Drizzle ORM

- Built a personal-finance PWA with Next.js and TypeScript, integrating Plaid Link to securely connect bank accounts and synchronize transactions, balances, and investment data
- Designed a Neon Postgres data layer with Drizzle ORM, webhook-driven syncing and daily balance snapshots; protected bank tokens with AES-256-GCM encryption and signed HTTP-only sessions

TECHNICAL SKILLS

Languages: Java, Python, C, C++, C#, SQL, JavaScript, TypeScript, R

Tools & Technologies: Git, Docker, Claude Code, AWS, FastAPI, GitHub Actions, Scikit-learn, HTML, CSS, Node.js, React
